

The Atlas Galactica

A listing of systems, anomalies, planets and cultures in the universe

Creating Entries

A quick note on the Galactica (or other) template - it will be the same for every page in the "galactica:" namespace. Only galaxies should use "galactica:name of galaxy" when you create a page. In order to get different templates for different levels of item - use the appropriate namespace-

What I want to add

Type of item	Namespace	Example	Linked Example
Galaxy	galactica	galactica:Milky Way	Milky Way
Solar System	system	system:Sol	Sol
Planet	planet	planet:Jupiter	Jupiter
Moon	moon	moon:Callisto	Callisto
Other	other	other:Mars-Earth Asteroid Belt	Mars-Earth Asteroid Belt

More about the template can be found here - http://wiki.splitbrain.org/wiki:namespace_templates

Template Suggestions

System name, information (star, general planet info)

Science type: Hard Science / Rubber Science / Fantasy

Setting recommendation : Terran Empire / Alien Wars / Other / etc..

Planet name, information (orbit, geography)

Link to a page on the planet (for more detail about that planet)

Suggestion 1

Hard Physical Data (probably at the top level)

Atmospheric Composition

Hydrosphere

Lithosphere

Gravity (and/or Escape Velocity)

Temperature Extremes

Signs of Tectonic Activity

Soft Data (inside the sol-<planet> page)

Sentient Life Forms

Population

Cultural Basis

Major Religion(s)

Traded Commodities

Threatening Lifeforms (including virii, etc.)

Notable Physical Phenomena (Northern Lights, Queen's Falls, etc.)

Galaxies

- Milky Way
