

Hypersteel

Base metals are still used for a variety of purposes, however, current military needs require carbon nanotubes, self-repairing materials and heavy weapons that can be borne by a single soldier. Master craftsmen, such as the [Sons of Ivaldi](#) have at their disposal [Hyperforges](#) that can twist an object's mass out of realspace and into the [Ginnungagap](#), or hyperspace. This process, Hyperforging, leaves behind an object of little weight and vast inertia, able to pierce, pound or penetrate with far more effect than their mundane counterparts.

Hyperforged: Increase a melee weapon's damage by 50% and add Armor Piercing (+1/2). Impact weapons such as Hammers and Maces add Area of Effect (One Hex, +1/2). Bladed weapons add Penetrating (+1/2).
