

The Standard

The Standard is a scientific.religious measurement of what makes a world *Privileged* or, in less arcane terms, habitable by the Major Life Forms of the Galaxy. This set of traits describes over 300 of the worlds in or near the [Union Core](#), and fewer and fewer as one leaves the Orion Arm in any direction.

It is postulated by the [Universal Church](#) that the existance of so many such worlds so close to Earth is evidence of Design. The [Union Scientific Council](#) rejects this notion, suggesting that the Standard is either the work of an ancient race of terraformers or a really fantastic coincidence.
